Setting up iPad

1. **Start the Process.**
   The first step to setting up the iPad is to swipe from left to right across the bottom of the screen. This tells the iPad you are ready to use it and is the same action required any time you want to use the iPad.

2. **Choose Language.**
   You need to tell the iPad how to communicate with you. English is the default setting, but most common languages are supported.
3. **Choose Country or Region.**
   The iPad needs to know the Country you are located in to connect to the correct version of the Apple App Store.
   Choose Australia

4. **Choose a Wi-Fi Network.**
   Select your wireless network and enter in your security password, The iPad will confirm that it has connected to the wireless. If you are unable to connect to your wireless network please double check the password.

5. **Enable Location Services.**
   The location services allow the iPad to determine where it is located. Even an iPad without 4G and GPS can use location services by utilising nearby Wi-Fi networks to determine the location. Most people will want to turn this setting on.
   You will need this turned on for when you Install MobileIron.

6. **Set up as New or Restore From Backup (iTunes or iCloud).**
   If you just purchased the iPad, you will be setting it up as new. Later, if you run into problems that require you to fully restore the iPad, you will have the choice of using iTunes to restore your backup or using Apple's iCloud service. If you are restoring from a backup, you will be asked to input your iCloud username and password and then asked for which backup to restore, but if this is your first time activating the iPad, simply choose “Set Up as New iPad”.

7. **Enter Apple ID or create new Apple ID.**

    Please note: Apple's terms and conditions state that users must be 13 years of age or older to have a personal Apple ID. This means that prior to 13 years of age, the Apple ID associated with a child's iPad is the parents'/guardians' Apple ID for that device, and not the student's. Consequently, a user under 13 can have an Apple ID if it was created by a guardian using the family sharing feature.

    We ask parents/guardians of children under the age of 13 to create and manage their child's Apple ID. Parents can decide whether to continue to manage their child's Apple ID once he/she turns 13 years of age.

    (This information was correct as at the 16/09/2014. Whilst the US has enabled those under 13 to have accounts, this has not yet been transferred to Australia.)

    A Students Apple ID should not be used by anyone else but the Student. If the student is using a Parents Apple ID then a new Apple ID will need to be created by following the “Using Family Sharing to Create a Student Apple ID”

    If the student already has an Apple ID then enter the details of the Apple ID and press next. If the student needs to have an Apple ID created press skip and continue on with the setup instruction.

    Once finished setting up the iPad, please refer to “Using Family Sharing to Create a Student Apple ID”

8. **Agree to Terms and Conditions.**

    You will need to agree to the Terms and Conditions, and once you agree, the iPad will give you a dialog box confirming that you agree. You can also have the Terms and Conditions emailed to you by touching the button at the top of the screen.

9. **Set Up iCloud.**

    This will require an Apple ID, if you are going to set up an Apple ID later on then you can setup iCloud later on.

    Most people will want to set up iCloud and enable the iPad to be backed up to iPad on a daily basis. This means even if you run into major problems with your iPad, you lose it or it is stolen, your data will be backed up to the Internet and waiting for you when you restore your iPad. However, if you aren't comfortable saving your information to the Internet, or if you are using the iPad for business purposes and your place of work doesn't allow you to use cloud storage, you can decline to use iCloud.

10. **Use Find My iPad.**

    This will require an Apple ID, if you are going to set up an Apple ID later on then you can setup Find My iPad later on.

    This is a very handy feature that can both help you find a lost iPad or recover a stolen iPad. Turning on this feature will let you track the general location of the iPad. The 3G version of the iPad, which has a GPS chip, will be more accurate, but even the Wi-Fi version can provide amazing accuracy.

11. **iMessage and Facetime.**

    This will require an Apple ID, if you are going to set up an Apple ID later on then you can setup iMessage and FaceTime later on. You can choose to have people contact you via the email address used with your Apple ID. This allows you to take FaceTime calls, which is video conferencing software similar to Skype, or receive iMessage texts, which is a platform that lets you send and receive messages to friends and family that use either an iPad, iPhone, iPod Touch or Mac. If you already have an iPhone, you may see your phone number listed here, along with any other phone numbers and email addresses associated with your Apple ID.

12. **Create a Passcode.**

    A passcode can make your iPad more secure by requiring it to be entered each time someone
wants to use the iPad. This can protect you both against thieves and any pranksters you may know. A passcode is required by MobileIron

13. **Siri.**
   If you have an iPad that supports Siri, you will be prompted whether or not you want to use it.

14. **Diagnostics.**
   Choose to not send the Diagnostics details to Apple.

15. **Get Started.**
   The last step is to click on the "Get Started" link on the "Welcome to iPad" page. This finalise setting up the iPad to use.
